

system requirements

The following assumes installing a new server and workstations for *info:HR*. Depending upon the size of the organization, *info:HR* does not require its own server and can be run on any existing server. Larger organizations should consider stand-alone server(s) for the application and database.

Server

- Intel Dual- or quad-core processors (if a new server is being purchased, check the processor speed and amount of cache RAM. These requirements will vary depending upon the size of the organization/users and applications residing on the server.)
- Minimum 32 GB Memory; expandable as needed (Memory will be based on what applications used and how many users need to access the server)
- 300 GB Hard disk space available (more required as data grows)
- RAID controller
- Backup Device
- OS: Windows Server 2014 and above with CALs
- Can be setup for VMware or Citrix environments
- SQL Server Standard Edition 2014 and above with CALs
- Type of Windows and SQL CALs will be determined based on the size of the organization. Most organizations purchase User CALs.

Client

- Intel dual- or quad-core processors
- 250MB Hard disk space available
- Minimum 8 GB RAM
- Windows 8.0 and above

Web Component

- Internet Information Service (IIS) v7.0 and above
- Microsoft .NET Framework v4.5
- Minimum 1GB RAM; if other applications are running on the server, then increase the memory proportionally
- Windows Server 2014 and above
- Edge v20.1 and above; any currently-supported versions of Chrome or Firefox
- Web components are not heavy load applications; amount of RAM is based on the number of concurrent users accessing the modules
- Mobile version of ESS requires an SSL certificate on the web server
